• RTI in Reading in Middle School
• Schools that “Beat the Odds”
Current Understanding of Reading Difficulties and Disabilities
Children Do NOT Outgrow Reading Difficulties

A child who is a poor reader at the end of first grade has an almost 90% chance of remaining a poor reader at the end of Grade 4 (Juel, 1988) and at least a 75% chance of being a poor reader as long as they are in school (Francis et al., 1995)

....unless we provide quality intervention!
Francis et al. (1996)
Students who are performing below grade level will only close the gap with their classmates if they learn **FASTER** than other students.

*More Instruction*

*Efficient Instruction*

*More Practice*
Reading difficulty and disability

- *Is variation on normal development* (like high blood pressure or obesity, not the flu or cancer)
- *Is caused and influenced by several different factors*

Ease of Learning to Read (*Talent*)
The typical school approach to students with reading difficulties assumes that the problem is “within the student” and that this is a finite condition.
Reading Disability

• By far the most common type is dyslexia
  – Primary characteristic: Poor ability to read words, especially when presented in lists
  – Primary underlying cause: Poor phonemic awareness (ability to hear and manipulate sounds in words), NOT “seeing backwards”

• Less common are disabilities in comprehension and speed of processing text (fluency)
Comprehension Difficulties

• Many students with comprehension problems also have word reading problems—even in middle and high school.

• Students with adequate word reading but poor reading comprehension also have problems with comprehending oral language.
Causes of Reading Difficulties and Disabilities

- **Genetic:** A Genetic *Predisposition* (about 60% heritable)
- **Environmental:** Economic disadvantage (health care, preschool education opportunities, etc.); print exposure, parental literacy, oral language usage in the home and community, time spent reading to the child; *not receiving appropriate instruction*
- **Neurological:** Affected by both genetic and environmental influences
Reading failure is caused by the *interaction* between **features of instruction, the materials used**, and student characteristics.
Reading Difficulties and the Brain

The way the brain functions when doing reading tasks is different in people with serious reading difficulties (and in children at-risk for serious RD) and normally functioning readers.

But can this be changed?
Neural Response to Intervention

Does the pattern of brain activation change in response to intervention?

- 8 students with severe dyslexia
- 8 week intense phonologically-based intervention (2 hours a day = up to 80 hours of instruction)
- 1:1 in a reading clinic (during the summer)
- 2 hours a day = up to 80 hours of instruction

Simos et al., Neurology, 2002

The Power of **INSTRUCTION**

- Poverty
- IQ
- Family status
- Language levels
- Genetic predisposition
- Neurological processing patterns

**INSTRUCTION MAKES THE DIFFERENCE!**
One-Sentence Reaction

How might our current understanding of reading difficulties and disabilities affect practices in your school or classroom?
Core Principles of Response to Intervention (RTI)
“Response to Intervention (RTI) is a comprehensive early detection and prevention strategy that identifies struggling students and assists them before they fall behind. RTI systems combine universal screening and high quality instruction for all students with interventions targeted at struggling students.”

Gersten et al., 2008
What Works Clearinghouse
Institute of Education Sciences
US Department of Education
A 3-Tier Intervention Model

- **Core Classroom Reading Instruction**: All students
- **Supplemental Intervention**: Approximately 20–30% of students
- **Intensive Intervention**: Approximately 1%–10% of students
Data documenting how a student responds to evidence-based, quality reading intervention may be used as a component of the process of identification of a reading disability.
“It is **critical** that educators view RTI as a school-wide, multi-tiered prevention/intervention approach that is **aimed at meeting the learning needs of ALL students**, not just as part of the identification process for students with learning disabilities as referenced in IDEA 2004.”

Colorado Dept. of Education Exceptional Student Services Unit, 2006
Core RTI Principles

• We can effectively teach all students.
• Intervene as early as possible.
• Use a multi-tier model of service delivery.
• Screen all students to locate those in need of intervention.
• Monitor student progress to inform instruction.
• Use data to make decisions. Data-based decision-making is central to RTI practices.
• When possible, use programs validated by scientific research. When research-validated programs are not available, use evidence-based interventions and instruction.
What are research-validated programs?

What Is evidence-based instruction?
“Teachers, want, above all, to provide instruction that makes a genuine difference in the lives of their children.”

Lyon, 2000
Two Acceptable Standards

Research-Validated Programs

• The programs or teaching approaches themselves were **directly studied**
• Research was of **high quality**
• Program demonstrated **significantly better outcomes than a comparison condition**
• More than one study found similar results

Evidence-Based Programs and Practices

• Programs and teaching approaches **have characteristics that are known to be effective for struggling learners.**
• These characteristics are **derived from converging evidence from multiple scientific studies.**
Evidence-Based Instruction

• According to the publishers, *everything* is “research-based” or “evidence-based”

• How can we really know what will work best for our students?

![High-Quality Reading Research Student Data](scales.png)

Intuition Testimonials Poor-Quality or Biased Studies
Evidence-Based Instruction

High-quality scientific research controls for competing explanations for the findings so that you can trust the conclusions

– Random assignment
and/or

– Matched groups with assessments before and after the intervention to “equate the groups”
Evidence-Based Instruction

• Quality scientific research can indicate that a program is likely to be successful if it is implemented as it was in the study (with high fidelity)
• Research will *not* tell you what will work with every single child
• It can tell you what is *more likely* to work for most children
Evidence-Based Instruction

The use of teaching approaches that are not grounded in quality research and that result in a high percentage of students failing to learn to read "is analogous to a surgeon choosing to perform a procedure that has a 19% mortality rate over one that has a 10% rate because (1) it is easier to do, (2) the surgeon is trained in it, and (3) the surgeon simply likes it better."

Walker, Ramsey, & Gresham, 2004
The more well-conducted research converges on the same findings, the more we can rely on the findings.

Research in early reading conducted over the past 25 years has converged on a set of findings that should inform our selection and implementation of reading programs.
Evidence-Based Instruction and Intervention for Primary-Grade Readers
Tier 1 Classroom Reading Instruction

- Adoption of an evidence-based core program makes quality instruction more likely
- **Differentiated Instruction**
  - What are the other students doing?
  - Purposeful activities, provide independent practice on objectives that have already been taught
  - Students understand what to do and are successful
- **Adaptation of Instruction When Needed**
Adaptation Framework

Skills and concepts that are the focus of teaching and Learning (Objectives)

Instructional Content

Instructional Activities

Delivery of Instruction

Instructional Materials

Lessons used to teach and reinforce skills and concepts

Procedures and routines used to implement instructional activities

Materials used to teach and reinforce skills and concepts

University of Texas Center for Reading and Language Arts, 2003
From Bryant & Bryant, 2003; Bryant, Smith, & Bryant, 2008
Adaptation Framework

Skills and concepts that are the focus of teaching and Learning (Objectives)

- Segment and blend CCVC Words
- Sound out words with r-control vowels
- Read grade-level text at 45 wcpm
- Locate the most important idea in a paragraph
Adaptation Framework

- Introduce the new letter sound
- Provide guided practice
- Provide independent practice
Adaptation Framework

- Instructional-level text
- Decodable text
- Magnetic letters or letter tiles

Instructional Materials

Materials used to teach and reinforce skills and concepts
Delivery of Instruction

Adaptation Framework

- Decrease group size
- Make instruction visible and explicit
- Provide additional practice
- Adjust pacing
- Divide tasks into smaller steps

Procedures and routines used to implement instructional activities
Tier 2 Interventions
Study of First Grade Reading Intervention
(Mathes, Denton, and others, 2005)

• At-risk first graders randomized within schools to Intervention 1, Intervention 2, or Typical School Practice

• Daily 40 min. lessons, Groups of 3-4, about 30 weeks
  ▪ Provided in addition to quality classroom instruction in a “pull-out” format
  ▪ Taught by certified teachers

Research supported by Grant # NSF 9979968; Interagency Educational Research Initiative.
Proactive Intervention*

- Explicit instruction in synthetic phonics, with emphasis on fluency
- Carefully constructed scope and sequence designed to prevent possible confusions
- Scripted program with time dedicated to practice in phonics skills outside of text reading
- Skills applied in fully decodable text
- Mastery tests

*Now SRA Early Interventions in Reading, Mathes & Torgesen, 2005
Responsive Reading Instruction

- Explicit instruction in synthetic & analogy phonics
- Less time spent practicing letters and words in isolation
- Students apply decoding, fluency, & comprehension skills while reading and writing
- Not scripted; teachers plan lessons based on continuous diagnostic assessment
- Leveled text; not decodable
- Differs from guided reading in that “sounding out” is the primary strategy for identifying unknown words

Denton & Hocker, 2005
Results

• Students in both Proactive and Responsive groups performed significantly better than at-risk students in the same schools who did not receive the researcher-provided interventions in phonological awareness, word reading (timed and untimed), spelling, and oral reading fluency.

• Two interventions had very similar results; Proactive did better in non-word reading (phonemic decoding).
Growth in Word Reading by Intervention Group

Z-Score

Normal  Proactive  Responsive

Control
What percentage of children did not respond adequately to intervention? (Woodcock Basic Reading Cluster < 30th percentile)

**Tier 1 Only:**
16% (about 3% of school 1st grade population)

**Tiers 1 and 2:**
- **Proactive:** 1/80 = < 1% (about .2% of school population)
- **Responsive:** 6/83 = 7% (about 1.5% of school population)

Mathes, Denton, Fletcher, Anthony, Francis, & Schatschneider (2005)
Implications

• There is not one “magic program” to teach students with reading difficulties
• Various reading programs have produced good results
• They put different demands on teacher time and expertise (e.g., scripted, unscripted).
• They have some common characteristics
Essential Characteristics Common to Successful Interventions

- *Integrated* instruction in key areas of reading, targeting students’ needs: phonemic awareness, phonics, fluency, vocabulary, comprehension
- Explicit instruction
- Systematic instruction
- Small-group instruction with active engagement and little “down time”
- Extended opportunities to practice with feedback
- Opportunities to apply skills and strategies while reading connected text with teacher feedback
- Use of data to provide targeted instruction
Explicit Instruction

• Clearly explain or show students what you want them to learn

• Students do not have to infer what they should learn

• *Students who are easily confused are more likely to be successful.*
Explicit Instruction

• Purposeful planning with a clear objective
• Model and teach clearly
• Guided practice with clear feedback, specific praise, and scaffolding
• Independent practice
• Cumulative practice
• Continuous assessment
• Reteach as necessary
Basic Instructional Format

✓ Model and teach ("I do")
  Show students the correct way.

✓ Guided practice ("We do")
  Students do it with teacher support.

✓ Independent practice ("You do")
  Students practice alone.

✓ Cumulative practice
  Students practice new items along with items already learned.
Systematic Instruction

• Based on a scope and sequence
• Thoughtful *plan* and *purpose* for instruction
• Sequence of instruction ensures key skills are mastered
• Easy to hard
• Separate possible confusions
• Frequent reviews
Active Student Involvement

• Little “Teacher Talk”
• Quick pacing
• Little “down time”
• May include manipulatives
• Daily reading practice scaffolded by the teacher
The Importance of Practice

- Provide many opportunities for monitored practice.
- Students need extended practice over time.
- What is practiced becomes a habit.
- Caution: Don’t let students practice their mistakes!
Feedback

• Students need to know when they’ve made mistakes.
• Don’t let students practice their mistakes.
• Errors are opportunities for teaching.
• Provide feedback in a neutral tone
• Do not underestimate the power of specific, honest positive feedback
Meaningful Reading and Writing Practice (Guided Application)

• Students apply skills and strategies in reading and writing.

• Teacher (or trained tutor) provides scaffolding, prompting and both corrective and positive feedback.

• At-risk students do not “automatically” apply the skills they have learned

See Handout 1
Popular Strategies of Struggling Readers When they Encounter Difficult Words

• Guessing words
• Looking at pictures instead of print
• Skipping words
• Waiting to be told words
• Mumbling
A Strategy for Reading Unknown Words

Three-Step Strategy

1. Look for parts you know.
2. Sound it out.
3. Check it.

Denton & Hocker, 2006
### Scaffolds

<table>
<thead>
<tr>
<th>Look for parts you know.</th>
<th>Sound it out.</th>
<th>Check it.</th>
</tr>

<td></td>
</tr>
</tbody>
</table>

Denton & Solari, 2012; unpublished reading curriculum
Data-Based Targeted Instruction

- Meet students where they are; go from the *known* to the unknown.
- Use *progress monitoring* data to inform instruction.
- Plan lessons based on *diagnostic assessments*.
- When instruction is not appropriate for the student, behavior problems are common.

**What I Know**  
**What I Need to Learn**
Growth in Oral Reading Fluency for Imari
Growth in Oral Reading Fluency for James

Trend Line
Growth in Oral Reading Fluency for James

Trend Line #2
Selecting Tier 2 Programs

Select a “Research-Validated” program

or

Select a program with these key evidence-based characteristics

See Handout 2
Adapting Instruction Using Evidence-Based Practices

• Imagine that a first grade teacher has taught a lesson on sounding out silent e words
• One group of students impulsively guesses words rather than using sounding-out strategies
• How might the teacher adapt instruction for this group in a small group lesson?
• Think about all 4 types of adaptations.
Tier 3: Intensive Intervention
Characteristics of Many Students in Tier 3

- Difficulties reading single words
- Oral language difficulties (vocabulary, word retrieval)
- Poorly-developed background knowledge
- Difficulties with verbal working memory
- Impaired executive functions (attention, purposeful use and regulation of reading strategies; identifying what is important; self-monitoring)
- Low self-esteem
- Low motivation to read
- Social and behavioral difficulties
A Complex Picture

- Many students with RD also have other conditions that affect learning
- Anxiety, behavior disorders, etc.
- Attention problems
  - About 25% of children with ADHD also have RD, and about 25% of children with RD also have ADHD
  - It is Inattention, not hyperactivity, that is related to RD
  - Children with both disorders are more severely impaired and resistant to remediation
  - A study in progress is evaluating treatments for children with both disorders: I-CARD (Interventions for Children with Attention and Reading Disorders)
What kind of intervention is effective for students who don’t respond adequately to effective, relatively intensive Tier 1 and 2?
What Does Intensive Reading Intervention Mean? Think about “Intensive Care”

- Very small groups
- Increased dosage
- Appropriate curriculum
- Powerful instruction
- Constant monitoring
- A sense of urgency
- Collaboration among teachers
Three Tiers of Instruction in the Primary Grades: One Example with Less Intensive Tier 2 Intervention

Denton, Cirino, Barth, Romain, Vaughn, Wexler, Francis, & Fletcher (2011)

Denton, et al., manuscript under review
First Grade Study

• Compared outcomes for Tier 1 intervention Plus Tier 2 intervention provided for 1 semester on 3 schedules
• 9 schools in 2 school districts
• Identified instructional characteristics that impacted student outcomes
Timeline: First Grade Year

Screen Sept.  N = 680
Progress Monitor Sept.-May  N = 461
Pretest Nov.-Dec.  N = 273
Begin Tier 2 January  N = 209
Tier 2 Intervention 8 or 16 wks
Low Responders  N = 105
Post-Test May  N = 193

Tier 1 Classroom Teacher Data Meetings/PD Monthly
Supporting Tier 1

• Provided **graphs of progress monitoring data**
• Regular **data meetings** with classroom teachers: examined progress monitoring data for their 3 lowest students (Tier 3 or Typical Practice)
• Provided Brief PD on **adapting instruction in Tier 1** to increase use of evidence-based practices
• In-class **coaching** on request
Tier 2 Intervention

- First Grade Tier 2: Screened students in the Fall and monitored progress for 8 weeks, then selected Tier 2 students
- Provided Tier 2 “pull-out” intervention beginning in January on three schedules for 8-16 weeks (30 min. lessons)
- Highly Standardized (scripted) intervention provided by paraprofessionals
- Results were not as strong as in previous studies with more intensive Tier 2 intervention
Tier 3 Timeline

Randomized to Tier 3 Intervention or Typical School Practice
N = 103

Two Schools Dropped Out, Students Moved, etc.
N = 72

Tier 3 Intervention
Oct.-April
N = 47
Typical Practice
N = 25
Study of Individualized Tier 3 Intervention

- Identified those with inadequate response to Tiers 1 + 2 in word reading and fluency
- Randomly assigned low responders to the research intervention or typical school practice
- Provided “pull-out” intervention to treatment group in groups of 2-4, 45 min., 4 days per week; tutors were hired and supervised by the researchers

Denton, et al., manuscript under review
Study of Individualized Tier 3 Intervention

• Groups of 2-3 with certified teachers or experienced reading clinicians, hired, supervised, and coached by the researchers
• 45 min. lessons 4 days/week, about 26 weeks
• Individualized within a framework
  – Planning based on frequent diagnostic assessment
  – Each lesson included word study, fluency, text reading with integrated comprehension instruction, and writing in response to text (amounts of time for each varied)
  – Teachers determined instructional objectives and selected activities from a “menu” (Responsive Reading Instruction + more advanced activities)
<table>

</tbody>
</table>
Results

• Tier 3 Intervention group had better gains than Typical Practice group on all measures.
• Statistically Significant in Word Reading and Phonemic Decoding, Word Reading Fluency, one measure of reading comprehension.
• “Practically important” effects in Decoding Fluency, Reading Comprehension in extended text.
• No meaningful differences in oral reading fluency.
Word Reading and Decoding
Standard Score Change

Tier 3: 4.17
TSI: -1.44
Word Reading and Decoding Fluency

Tier 3: 8.44
TSI: 3.8

Oral Reading Fluency (wcpm)

Tier 3: 33.13
TSI: 30.24
Comprehension of Paragraphs

Tier 3: 5.49
TSI: 2.44

Comprehension of Extended Text (Percentiles Gained)

Tier 3: 8.04
TSI: 2.44
But...

- No meaningful differences in oral reading fluency
- Most students remained impaired in fluency and comprehension
- Students with low RTI in Tier 3 are severely impaired in language domains
- They will probably need an extended period of practice with feedback as well as effective vocabulary instruction and activities designed to build background knowledge
Implications

• Less intensive Tier 2 intervention was not as effective as more intensive interventions

• Tier 3 intervention that was individualized within a framework was significantly more effective than typical school practice on multiple measures

• Oral reading fluency is consistently more difficult to impact; provide extended reading practice with feedback

• Comprehension strategy instruction is probably not enough for very impaired readers: Build vocabulary and background knowledge
How might this research inform your implementation of RTI?

Identify one idea to take back to your colleagues related to:

- Tier 1
- Tier 2
- Tier 3
Implementing Interventions: Practical Questions
Tier 2 & 3 Implementation: What Can We Learn from Research?

• When should Tier 2 start?
• Intervention “dosage”
• Group size
• Interventionists and location
• How should we evaluate response?
When should Tier 2 start?

• Second half of kindergarten?
• Beginning of Grade 1?
• Middle of Grade 1?
• There are tradeoffs
  – Start early: Probably many “false positives”
  – Start later: Waste precious time for students who really need intervention
  – May be a matter of resources and priorities
Tier 2 Intervention Dosage: Kindergarten
Al Otaiba, Schatschneider, & Silverman, 2005

• Randomly assigned students to receive the same small-group intervention 2 or 4 times per week or to a control condition
• 4 X per week performed significantly better than controls in word reading and comprehension, with large effect sizes
• 2 X per week performed significantly better than controls only on one phonemic awareness measure
Time in Tier 2 Intervention (Grade 1)

Denton & Mathes, 2003

• Provided intervention to 163 first graders at-risk for reading difficulties
• Intervention provided daily for 40 minutes over 30 weeks in groups of 3-4 students
• Monitored ORF every 3 weeks
• Did not exit students from intervention but analyzed the percentage of students that met benchmarks at different points
Time in Tier 2 Intervention (Grade 1)
Denton & Mathes, 2003

If students meet benchmarks, you may consider an earlier exit, but provide regular “booster sessions”.
Group Size

Tier 2
- Based on direct research
  - 1:3 has comparable outcomes to 1:1 for most students
  - 1:3 is better than 1:10
- Based on effective interventions: 1:3 to 1:5

Tier 3
- Based on effective interventions: 1:2 or 1:1 (possibly 1:3)

Elbaum, Vaughn, Hughes & Moody, 2000; Vaughn et al., 2003
Who Can Provide Intervention?

Tier 2

- Reading Specialists
- Paraprofessionals and other teachers, under certain conditions
- Classroom Teachers, under certain conditions
  - Consider scheduling and other demands
  - Cross-classroom collaboration?

Tier 3: Highly qualified and well-trained teachers with coaching support
Paraprofessionals and Tutors

• Tier 2 intervention provided by non-certified paraprofessionals or tutors can result in improved outcomes for students (demonstrated in several studies)

• Important considerations
  – Carefully selected tutors (must have adequate PA, be able to learn letter-sounds, etc.)
  – Well-trained
  – Supervised and coached closely by a well-qualified teacher
  – Implement a well-described program (potentially scripted)
  – Keep group sizes small (e.g., 1-3 students)
How should response be evaluated?

• Types of measures
  – Progress monitoring (repeated measures)
    • Slope (rate of growth) vs. ending level
  – Final benchmark
  – Combinations

• Reading domains
  – Word reading/decoding
  – Fluency
  – Comprehension

• Actual benchmarks or cut-points: $20^{th}$ %ile? $25^{th}$? $30^{th}$? $40$ wcpm?
Approaches to Evaluation of RTI

Approaches that differ on these dimensions are likely to identify different students as adequate and inadequate responders, and there may be little or no overlap in the identified groups!

Barth et al., 2008; D. Fuchs et al., 2008
An Evaluation of Criteria for Grade 1 Reading: Which approaches best predicted status at the end of Grade 2?

- Low *pre-test* scores on a test of word reading fluency
- Final benchmark of the 20th % ile on the *Test of Word Reading Efficiency* Sight Word Efficiency subtest
- Word Identification Fluency slope at least 1 *SD* below a normative sample

D. Fuchs et al., 2008
Other Considerations

- **Final benchmarks** of performance at the 20th or 30th percentile on standardized tests of *word reading or word reading fluency* have been used in research.
- **Fewer students will meet fluency** benchmarks than word reading benchmarks, but fluency is closely related to comprehension in the primary grades.
- **Multiple measures are better** than a single measure:
  - All tests contain error
  - Any time a single cut-score is applied to make decisions, there will be errors on both sides of the cut-off
If you gave the same test to the same student tomorrow, the score would be a little different.
Other Considerations

• There are **mixed findings on the use of slope** (rate of growth) on repeated fluency measures (Schatschneider, Wagner, & Crawford, 2008).

• Oral reading fluency passages are not “truly” equivalent in difficulty, introducing error into calculations of slope (Francis et al., 2008).

• **Definitely** use progress monitoring data to inform instruction.

• **Comprehension standards may make more sense beyond Grade 1**
Challenges: Implementing an RTI Model

There is never enough **TIME**
There is never enough **MONEY**
There are never enough **TRAINED PERSONNEL**
The numbers of children who still have reading difficulties after intervention is related to the *nature, quality, quantity* and *intensity of instruction*.

The Power of

**Instruction!**
What is the biggest challenge to RTI implementation in your school?

What is ONE idea for overcoming that challenge?
RTI in Middle School
Jack Fletcher and David Francis, University of Houston
Sharon Vaughn, University of Texas at Austin

Funded by the National Institute of Child Health and Human Development (NICHD).
Award # P50 HD052117-01

The Texas Center for Learning Disabilities (TCLD) investigates the classification, early intervention, and remediation of learning disabilities.
One Example of a Tiered Middle School Reading Intervention

Tier 1: All Students

Common Content-Area Comprehension and Vocabulary Strategies

Strategic Intervention

Intensive Intervention

Tier 3

Tier 2

High Standards; Effective Instruction; Instructional Leadership; School-wide Commitment; Safe and Positive School Climate

Denton et al., 2012, Brookes publishing.
Screening, Identification, and Diagnostic Assessment

- Comprehension
  - State Test or Other Standardized Test

- Fluency
  - Oral Reading Fluency and/or TOSREC (Silent Fluency and Comprehension)

- Word Identification
  - Phonics Inventory

Denton, Barth, et al., 2011
RTI In Middle School
(Vaughn, Fletcher, and Others)

- Year 1: Tier 1 and Tier 2 intervention, Grades 6-8
- Year 2: Tier 3 Intervention for Low Responders, Grades 7-8
- Year 3: Continued Intervention for Low Responders, Grade 8
Tier 1 in Middle School

- Implemented across content area classes and reading classes
- Small number of evidence-based vocabulary and comprehension strategies taught and used consistently across classes
- Teacher study groups in which they collaboratively planned lessons
- “Bell-to-bell teaching”
- Active student involvement
Effective Instruction for Middle School Students with Reading Difficulties: The Reading Teacher’s Sourcebook

Free Download from http://www.texasreading.org/utcrla/materials/middle_school_instruction.asp

By Carolyn Denton, Sharon Vaughn, Jade Wexler, Deanna Bryan, & Deborah Reed

Also available from Brookes Publishing
Tier 2 Students

• Struggling readers had failed the state high-stakes reading comprehension test or were on the “bubble”, or had not taken the test at grade level
• All read at least at a 3rd grade level
• Many had decoding and fluency problems as well as comprehension problems
6th Grade Study: Tiers 1 + 2
Vaughn et al., XX

• Struggling readers in 7 middle schools randomly assigned to Tier 2 intervention (n at posttest = 212) or Typical School Practice (n at posttest = 115)

• 3 urban schools (2 “inner city”); 4 located near a small city
Tier 2 Implementation

- Took the place of an elective, about 50 minutes daily, year-long
- Class sizes of 10-15 students
- Researchers hired and supervised intervention teachers, who received substantial professional development
Tier 2 Description

• **Phase 1**: Primary emphasis on multisyllable word study and reading fluency with secondary emphasis on vocabulary and comprehension (7-8 weeks)

• **Phase 2**: Primary emphasis on vocabulary and comprehension with secondary emphasis on word study and fluency (application of multisyllable word reading strategies learned in Phase 1) (17-18 weeks)

• **Phase 3**: Continued vocabulary and comprehension, with greater emphasis on independent student application of skills and strategies (8-10 weeks)
Results: 6th Grade Study Tiers 1 + 2

• Tier 2 Intervention Group outperformed Typical Practice Group on word attack, spelling, the state accountability comprehension test, passage comprehension, and phonemic decoding efficiency.

• But...actual gains were small

• Effects were more apparent in particular subgroups of students (at a given site or at certain levels of pretest performance or age)
Pretest Scores for Tier 3 Study

Mean = 100, sd = 15
Tier 3: Grade 7
(Vaughn et al., 2011)

- Treatment students with low response in Grade 6 randomized to receive a standardized or individualized intervention
- Students still below benchmark in the comparison group continued in comparison condition
- No significant differences between standardized and individualized
- Treatment outperformed comparison on several reading outcomes
Extended Tier 3: Grade 8
(Vaughn et al., 2012)

- Low responders to Grade 7 intervention received continued intervention in Grade 8
- Students still below benchmark in the comparison group continued in comparison condition
- Groups of 2 to 4, individualized intervention
- Treatment students performed significantly better than comparison in word identification and reading comprehension
- BUT treatment students did not close the gap with average students; they maintained their discrepancy, while comparison students declined.
Many people are suggesting a “triage” approach rather than a “tiered” approach for older students. Secondary struggling readers with the most severe problems are several years behind.

**Why put off intensive intervention?**

Vaughn, Denton, Fletcher, 2010
Intervention for Older Students: Take-Away Messages

- Adolescence is not too late to intervene
- Problems are more complex, and progress is typically slower than in the primary grades
- Serious reading difficulties are not easily remediated; it may take several years
- Many students with comprehension difficulties also have word-reading problems; provide a word identification program if needed
Percentage of Adolescents (G7-12) who Fail and Pass the Texas State Comprehension Test who are Adequate Decoders (above the 20th percentile on WJ III Letter-Word Identification)

**Poor Comprehenders**
- Poor decoders: 34.3%
- Adequate decoders: 65.7%

**Adequate Comprehenders**
- Poor decoders: 8.6%
- Adequate decoders: 91.4%

Barnes, Denton, et al.; Reading for Understanding grant
• Implement a school-wide approach to enhanced vocabulary instruction and the use of a small number of consistent comprehension strategies in every class.

• Comprehension strategy instruction is probably not enough to overcome deficits in vocabulary and background knowledge.

• Prioritize high-quality vocabulary instruction and look for ways to build background knowledge.
  - Read aloud to students
  - Prioritize expository text reading
  - Ensure that students read text in content-area classes (use partner formats, etc.). Use graphic organizers to guide their reading.
Interactive Graphic Organizers

• Help students understand relationships among key facts and concepts
• Can take many forms
• More effective if students are required to actively label, illustrate, sequence, etc.
• Students may write study guide questions using the graphic organizer.
• This supports literal understanding; students should be asked to use this literal information in some way to solve a problem or to connect it with other information

Voices of Students

“I would not mind starting over...But can you do that without my friends knowing about it? If so, I would love to learn my letter sounds again and learn how to pronounce words right. It would be good if I could figure out what words mean and could figure out what those stories mean.”

...A middle school student

McCray, Vaughn, & Neal, 2001
“I have been learning a lot. Some of the good things this year are that I can read what is on the menu for lunch. I tried to read the menu and would get so frustrated and I just had to stop. I used to shut down. I ate the same thing every day at school because I couldn’t read the menu. Now I still get frustrated, but I’m getting better.”

...A middle school student

McCray, Vaughn, & Neal, 2001
Schools that “Beat the Odds”
Characteristics of Schools with High Reading Performance Despite Challenges

- Strong instructional leadership
- Goal-setting and planning
- Regular assessment and monitoring of student progress
- Targeted instruction and intervention (A “whatever it takes” attitude)
- A “no excuses” approach with high expectations for every student
- A sense of urgency and a public commitment to learning

Denton, Foorman, & Mathes, 2003
Cortez Elementary: Instructional Leadership

• Intervention is **not just for the students**. The principal, a former first grade teacher, is the **leader of her instructional team**.

• When a teacher needs assistance, the principal provides **mentoring and coaching**. She may personally go into a classroom to coach the teacher and model instructional approaches, send a reading specialist in, or send the teacher to get targeted training.

• At the same time, **the principal supports the teachers and provides what they need to succeed**. She has removed many of their duties, freeing their time for collaboration and planning for at-risk students.
Pinedale School: Goal-Setting, Shared Responsibility with Central Coordination

• **Nothing is left to chance**, and no child is allowed to “fall through the cracks”

• At the beginning of each year, the teachers **evaluate each child and set individual goals** based on the results.

• **Classroom teacher is the “case manager”** for each student in her room. Students may receive services from other specialists, but the teacher coordinates the services and has ultimate responsibility for the student.
Pinedale School: Assessment

• **Reading progress** of each Tier 2 and 3 child **is monitored** weekly.

• **Principal meets with teams of teachers weekly** to look at the results and discuss changes that need to be made if a child is not on track to meet his/her reading goals.

• When a child is not on track, **everyone works together** to devise a plan.

• Discussion is **descriptive** rather than **punitive**. **ALL** teachers and administrators are responsible for the progress of **ALL** students.
**Cortez Elementary: Intervention**

- Principal describes "relentless" intervention
- Classroom teachers: 90 minutes of core reading instruction each day plus short-term Tier 2
- If needed, tutoring before or after school (in addition to the above).
- If needed: extra 45-minutes from a reading specialist each day
- Most at-risk taught by a dyslexia specialist.
- The most at-risk students, and students with reading difficulties who move into the school get "intensive care", a special short-term intervention during recess (with prizes and pizza for motivation).
Prospect School District Elementary Schools: Concentrated, Coordinated Intervention

- Universal screening and progress monitoring with **extensive use of the data** at the district, school, and classroom levels
- Extensive, targeted teacher professional development (principals attend too)
- **Tier 1:** 90-minute daily reading instruction with an evidence-based core program and small-group instruction
- Classroom reading teachers provide extra short-term skills-based intervention based on specific needs
Prospect School District Elementary Schools: Grade 1 Intervention

• Reading specialists “push-in” to provide small-group intervention to Tier 2 and 3 Students during the regular reading block (intervention students receive a small group lesson from their regular teachers AND another one from the specialist)

• The same reading intervention teachers provide supplemental “Tier 3” intervention to students with the most severe needs (identified at the beginning of Grade 1 rather than waiting for Tier 2 to be ineffective)
Eastport Elementary: Thinking Outside the Box

• No designated reading interventionists; 4 first grade classrooms
• For 40 minutes every day, at-risk students go to intervention while all others have science/social studies
• Every day, during science and social studies times, 2 1st grade teachers take larger classes to free up the other 2 to deliver intervention; 2 special education teachers also provide small-group intervention during the same period
• Intervention is provided to 4 groups of 3-4 of the most at-risk students from each classroom for 40 min. per day
• Teachers are trained and coached in delivery of a research-validated intervention
MLK Middle School: Instruction and Intervention

• All students receive a reading class every day.

• Students are grouped according to ability; assessed and re-grouped every 6 weeks; instruction is provided at students’ levels.

• **ALL teachers at a grade-level provide reading instruction during one class period each day** (including content-area teachers, the gym teacher and the librarian!)

• Implement a research-supported scripted program.

• Teachers receive professional development and coaching in implementing the program.

• Struggling readers receive small group intervention during this same period.
“No Excuses” Attitude: Cortez Elementary

Principal:

“We (should be) able to see that we are teaching what the child needs to learn, and if not--why? And so we always are looking at ourselves. Is it our curriculum; is it the strategies the teacher might not have?”
Teacher at Cortez Elementary: “As professional educators we are responsible for teaching children to read. If they have an awful home life, we still have to teach them to read. We can’t have excuses, even if parents are in jail or homeless.”
A Sense of Urgency

“If (there is) a very at-risk child, …we adjust the schedule of the child. If he needs extra help, that next day he will have a reading specialist work with him. If that’s not enough, then we have tutorials, and another teacher will work with him. We’ve built all of these safety nets to protect children who are at-risk. A child who is very at-risk will have a schedule that is very different from other students.”

…A school principal in Denton, Foorman, & Mathes (2003)
Students who are performing below grade level will only close the gap with their classmates if they learn FASTER than other students.

The bottom line...

More Instruction
Efficient Instruction
More Practice
How can you convey a sense of urgency in your school or schools?
Einstein’s Definition of Insanity

Doing the *same thing* over and over again and expecting different results.

RTI: Selecting and Implementing Evidence-Based Reading Interventions

Reflections

1. *How might our current understanding of reading difficulties and disabilities affect practices in your school or classroom?*

2. *Where is your school in implementing RTI?* (Universal screening, Tier 1, Tier 2, Tier 3, Progress monitoring, Professional development)

   - Exploration
   - Commitment and Adoption
   - Partial Implementation
   - Full Implementation
   - Sustainability

3. *How might research on RTI in the early grades inform your implementation of RTI?*

   *Identify one idea to take back to your colleagues related to each intervention tier.*

   - Tier 1
   - Tier 2
   - Tier 3
4. What is the biggest challenge to RTI implementation in your school?

What is one idea for overcoming that challenge?

5. How can you convey a sense of urgency in your school or schools?

References

Handout 3

Adaptation Activity

Imagine that a first grade teacher has taught a lesson on sounding out words with the ai vowel team (rain, train, etc). One group of students impulsively guesses words rather than using sounding-out strategies.

How might the teacher adapt instruction for this group? Think about all 4 types of adaptations.
