Using Key Components of a Multi-Tiered System of Supports (MTSS) Framework Session 3

NYS-Rtl TAC Fall 2016 Webinar Series

Dr. George M. Batsche Director Institute for School Reform University of South Florida batsche@usf.edu

- Using Key Components of a MTSS Framework
- Implementing the Common Core Learning Standards within MTSS
- Integrating the Data-Based Problem-Solving Process (Rtl) into a MTSS
- Aligning Instruction/Interventions with the CCLS and Integrating Instructional Practices Across the Tiers
- Ensuring the Integration of Academic Skills, Academic Behavior Expectations and Scaffolding to Maximize Student Engagement within the Instructional Process
- Meeting the Needs of Students with Disabilities and Students with 504 Accommodations Through Specially Designed Instruction within an MTSS Framework
- Have courageous conversations
- Reflect, celebrate, reverberate, breathe
- ➢ GET FIRED UP!

Review

Last time we talked about....

- Integrating Academic and Behavior Goals
- Aligning MTSS with the CCLS
- Unpacking the Standards
- Identifying Skills to be the Focus of Instruction and Problem-Solving
- Using Universal Design for Learning

This week we will....

- Identify the steps and activities in the problem-solving process
- Apply the problem-solving process to an actual case
- Use the Problem-Solving Fidelity Checklist to ensure fidelity of implementation.

Critical Components of MTSS

<u>MTSS</u> is a framework to ensure successful education outcomes for ALL students by using a databased problem solving process to provide, and evaluate the effectiveness of multiple tiers of integrated academic, behavior, and social-emotional instruction/intervention supports matched to student need in alignment with educational standards.

Problem-Solving is the Engine That Drives Instruction and Intervention

It is the MOST Critical Skill A Leader Can Possess

K. Leithwood, 2007

Problem Solving Process: Levels of Implementation

Level of Implementation	Problem Solving Team	Example
Student	Individual Teacher and/or Teacher Teams	Student is continually absent from class
Classroom	Individual Teacher and/or Teacher Teams	A large number of students in one classroom failed the unit test
Grade/Department Level	Teacher Teams and/or Instructional Leadership Team	A majority of students in grade 9 Algebra did not perform well on the mid-year assessment
School Level	Instructional Leadership Team	Low overall percentage of students meeting growth targets
District Level	District Senior Leadership Team 7	Increase in expulsions across schools

Problem Solving Process

Identify the Goal

What Do We Want Students to Know, Understand and Be Able to Do? (KUD)

Evaluate

Response to

Intervention (Rtl)

Problem Analysis

WHY are they not doing it? Identify Variables that Contribute to the Lack of Desired Outcomes

Implement Plan

Implement As Intended Progress Monitor Modify as Necessary

Steps in the Problem-Solving Process

1. Problem Identification

- Identify replacement behavior
- Data- current level of performance
- Data- benchmark level(s)
- Data- peer performance
- Data- GAP analysis

2. Problem Analysis

- Develop hypotheses (brainstorming)
- Develop predictions/assessment

3. Intervention Development

- Develop interventions in those areas for which data are available and hypotheses verified
- Proximal/Distal
- Implementation support

4. Response to Intervention (RtI)

- Frequently collected data
- Type of Response- good, questionable, poor

Step 1

Identifying the GOAL Setting the Benchmark Determining WHOSE Issue is it? Establishing a rate of progress necessary to attain the goal.

Problem ID Review

Problem ID Review

Problem ID Review

Steps in the Problem-Solving Process

1. Goal Identification

- -Identify replacement behavior
 - Pass math in 9th grade
- -Data- current level of performance
 - 193 are passing math 27 are not passing
- -Data- benchmark (desired) level(s)
 - 220
- -Data-peer performance
 - 193/220 passing
- -Data-GAP analysis
 - 27 students

Data-Based Determination of Expectations Math 9

- Current- 27 Students Failing
- Benchmark Level- 0 Failing
- Date- Want all passing within 9 weeks.
- Calculate-
 - Difference between current and benchmark level-220-193=27
 - Divide by # Weeks- 9
 - Result: # of student increased passing 3 per week in order to hit the goal of 27 in 9 weeks.

Students Passing Per Week Starting with 0/27 Total/9th Math

Step 2: Problem Analysis

The "Why", "Root Cause"

Hypotheses Development Assessment To Validate Hypotheses

Fact Finding

Problem Analysis is the process of gathering information in the domains of **instruction, curriculum, environment and the learner (ICEL)** through the use of **reviews, interviews, observations, and tests (RIOT)** in order to evaluate the underlying causes of the problem.

Generate Hypotheses

- Developing informed statements about <u>why</u> the desired behavior(s) are not occurring.
- The (desired behavior) is not occurring because...
- 27 students are unable to pass Math 1 because....

Sources of data to evaluate hypotheses ✓ Review

✓ Interview

✓ <u>O</u>bserve

✓ <u>T</u>est

(RIOT)

Develop Hypothesis: ICEL

- We must ask questions to form a hypothesis regarding "What is the goal not being attained? Why is the goal not being attained?"
- We ask questions across four domains.

Key Domains of Learning		
	Instruction	Instruction is how the curriculum is taught.
С	Curriculum	Curriculum refers to what is taught.
Ε	Environment	The environment is where the instruction takes place.
L	Learner	The learner is who is being taught.

Domain	Variables	Review	Interview	Observe	Test
Instruction is how curriculum is taught. How content is presented to students can vary in many different ways: Level of Instruction Presentation of Instruction Is the curriculum being differentiated to meet the needs of the learners? Consider: • instructional techniques • presentation style • clarity of instruction • questioning • feedback technique • cooperative learning • use of graphic organizers • instructional conversations • development of academic language/ vocabulary	 Group/System Instructional decision making regarding selection and use of materials Use of progress monitoring Explicit Instruction Differentiated Instruction Sequencing of lesson designs to promote success Use of a variety of practice and application activities Pace and presentation of new content Block of time allotted per subject Instructional decision making regarding placement of the student in groups Use of progress monitoring Communication of expectations and criteria for success Differentiated Instruction Direct instruction with explanations and cues Use of a variety of practice and application activities Pace and presentation of new content 	 Unit/Lessons Plans Permanent products (e.g., written pieces, worksheets, projects) for skill/degree of difficulty requirements Benchmarks / standards Assignments (calculate % of assign turned in, average amount-%- of assignments completed), Length/time required to complete assignments 	 Stakeholders about: Effective teaching practices Instructional decision making regarding choice of materials, placement of students, instructional strategies Sequencing/pacing of instruction Choice of screening, diagnostic and formative assessments Product methods (e.g. dictation, oral retell, paper pencil, projects) Grouping structures used Accommodations/modifications used Reinforcement management/ engagement strategies Allowable repetition for mastery/ understanding Who is providing the supplemental/ intensive instruction Use of supportive technology Student/group performance compared to peers Patterns of performance errors/ behavior Setting(s) where behavior is problematic Significance of academic, speech, social, task or motor difficulties Onset and duration of problem Consistency from day to day, subjectto subject Interference with personal, interpersonal, and academic adjustment Performance using different modes of expression (e.g. verbal, written, kinesthetic) Teacher perceptions/hypotheses regarding why the student is unable to demonstrate the desired behaviors-academic and/or behavioral Philosophical orientation of curriculum (e.g. whole language, phonics) Expectations of district for pacing/coverage of curriculum 	 Teachers' instructional styles/preferred styles of presenting Clarity of instructions/ directions Effective teaching practices Communication of benchmarks/expectations and criteria for success How new information is presented Percent of time with direct instruction, whole group instruction, practice time, differentiated instruction, etc. How teachers gain/ maintain student attention Academic engaged time Transitions Large group instruction Independent work time Group work time Teachers use of positive reinforcement, student- teacher interaction quality/quantity, (use of direct observation protocols) Time on task External supports necessary to sustain engagement 	Classroom environment survey Develop checklists on effective instruction "Things to Look For" and "Ask About"

Problem-Solving using the ICEL/RIOT Matrix

The schedule does not provide time/opportunity for practice and instruction necessary to "catch up".

The instructional strategies do not emphasize explicit instructional strategies, content enhancement routines, sufficient feedback, guided instruction, or differentiation

Expectations (home/school community)for performance are low

ບ

Pacing is too fast, does not provide for sufficient student engagement. Materials are not aligned with standards, and instructional sequences are not sufficiently explicit and inconsistent across teachers.

Happy High School

Hypothesis

The problem is occurring because

Happy High School

Hypothesis

÷

The problem is occurring because

Step 2: Problem Analysis (Why is it occurring?)

Generate multiple hypotheses addressing what you think is at the root of the identified issue.

Hypothesis sentence frame: The problem is occurring because _____

HYPOTHESIS 1	The difference between desired and current levels of performance in Math 1 exists because of excessive absences during Math classes.
Prediction If,then	When students attend class at a much high rate then they will receive passing grades.

Problem-Solving Protocol

HYPOTHESIS 2	The difference between expected and current levels of performance exist because not enough time is allocated for the most effective instructional practices.
Prediction If, then	If more time was spent during class time using instructional practices that had high rates of student engagement (modeled practice, guided practice with teacher support, guided practice with peer support) then student performance would improve

HYPOTHESIS 4	The difference between expected and current levels of performance in Common Core Math I exist because students who are failing complete less than 50% of their classwork and their homework.
Prediction If, then	When struggling students (D or F) complete more that 80% of their homework and classwork, then they improve at least 1 letter grade. When struggling students (D or F) complete less than 50% of their homework they do not improve at least 1 letter grade.

Test and Validate Hypotheses

Assessment Information RIOT

Step 2: Problem Analysis (Why is it occurring?) Generate multiple hypotheses addressing what you think is at the root of the identified issue.

Hypothesis sentence frame: The problem is occurring because _

HYPOTHESIS 1	The difference between desired and current levels of performance in Math 1 exists because of excessive absences during Math classes.
Prediction If,then	When students attend class at a much high rate then they will receive passing grades.
Relevant Data R I O T	Compare grade distributions of students attending 95% of the time or more to the grade distributions of students attending 80-89%.

Problem-Solving Protocol

HYPOTHESIS 2	The difference between expected and current levels of performance exist because not enough time is allocated for the most effective instructional practices.
Prediction If, then	If more time was spent during class time using instructional practices that had high rates of student engagement (modeled practice, guided practice with teacher support, guided practice with peer support) then student performance would improve

Happy High School ICEL by RIOT: Validating/Invalidating Hypothesis

Hypothesis 1:

The difference between expected and current levels of performance in Common Core Math I exists because of excessive absenteeism during *1st period*.

Data: The average rate of attendance for students receiving A-C grades is 96%. The average rate of attendance for students receiving F grades is 94%. No difference exists.

Complete Step 2

Step 2: Problem Analysis (Why is it occurring?)

Generate multiple hypotheses addressing what you think is at the root of the identified issue.

Hypothesis sentence frame: The problem is occurring because _____

HYPOTHESIS 1	The difference between desired and current levels of performance in Math 1 exists because of excessive absences during Math classes.
Prediction If,then	When students attend class at a much high rate then they will receive passing grades.
Relevant Data R I O T	Compare grade distributions of students attending 95% of the time or more to the grade distributions of students attending 80-89%.
Validated? Yes/No	NO. A <u>Review</u> of the attendance and grade data indicated that the students receiving F grades had attendance patterns very similar to those students receiving A-C grades.

Assessment Information RIOT

Problem-Solving Protocol

HYPOTHESIS 2The difference between expected and current levels of performance expected	
Prediction If, then	If more time was spent during class time using instructional practices that had high rates of student engagement (modeled practice, guided practice with teacher support, guided practice with peer support) then student performance would improve
Relevant Data R I O T	Observation- collect data during walkthroughs to assess the types of instruction strategies used, what percent of the time they are used and the level of student engagement for each type of strategy.

Model: Happy High School OBSERVE: Conducted Walkthrough

Instruction Component: Percent of Intervals Observed

Model: Happy High School OBSERVE: Walkthrough Data

Percent of Students Engaged by Instructional Component

Complete Step 2 Hypothesis 2

Problem-Solving Protocol

HYPOTHESIS 2	The difference between expected and current levels of performance exist because not enough time is allocated for the most effective instructional practices.
Prediction If, then	If more time was spent during class time using instructional practices that had high rates of student engagement (modeled practice, guided practice with teacher support, guided practice with peer support) then student performance would improve
Relevant Data R I O T	Observation- collect data during walkthroughs to assess the types of instruction strategies used, what percent of the time they are used and the level of student engagement for each type of strategy.
Validated? Yes/No	YES. The types and times of instructional strategies vary significantly and the strategies with the greatest student engagement are used for lesser amounts of time.

Complete Step 2 Hypothesis 3

HYPOTHESIS 4	The difference between expected and current levels of performance in Common Core Math I exist because students who are failing complete less than 50% of their classwork and their homework.
Prediction If, then	When struggling students (D or F) complete more that 80% of their homework and classwork, then they improve at least 1 letter grade. When struggling students (D or F) complete less than 50% of their homework they do not improve at least 1 letter grade.
Relevant Data R I O T	Review. Identify struggling students who complete less than 50% of their homework/classwork and students who complete more than 80%.

<u>Student Survey Data: Productivity</u>: The ILT collected survey data from all current students to better understand the barriers that impede productivity (work completion).

About how often do you not complete your classwork?									
Almost Everyday	1-3 times a	1-3 times a week		es a month 1-3 ti		times a semester	I always complete my classwork		
6%	11%			17%		12%	54%		
When you do not complete your classwork, it is because									
I don't understand how to do it	I need my teach me more examp to do it	I need my teacher to show me more examples of how to do it		I need my teacher to watch me work and correct my mistakes		asswork is boring	It doesn't matter if I do my classwork, I will fail anyway		
49%	23%	23%		31%		39%	9%		
About how often o	do you not comp	lete your	homework	?					
Almost Everyday	1-3 times a weel	1-3 times a week		1-3 times a month		nes a semester	l always complete my classwork		
9%	16%		16%		13%		46%		
When you do not complete your homework, it is because									
I don't understand how to do it 66%	I don't have help to do it 43%	I didn't wr the assign correctly	ite down ment 2%	I didn't bring home the right materials		No one is checkin to see if I did my homework 3%	g I always complete my homework without trouble 43%		
00/0	-370			13/0		570			

Grade Book Data

	Less than 50% work comp	80% or more work comp
Grading Period 1-1 st half	D or F grade	NA
Grading Period 1-2 nd half	D or F grade	C or D Grade

Step 3

Developing, Implementing Instruction/Interventions With Fidelity and Sufficiency

From Problem Analysis to Intervention

• Hypothesis 2: Validated

The difference between expected and current levels of performance exist because not enough time is allocated for the most effective instructional practices.

What type of intervention does this validated hypothesis suggest?

From Problem Analysis to Intervention

• Hypothesis 4: Validated

The difference between expected and current levels of performance exits because students are not completing sufficient amounts of homework and classwork.

What type of intervention does this validated hypothesis suggest? Is it a separate intervention or another validation for Hypothesis 2?

Interventions

- WHAT will be done?
 - Allocate more time to the most effective instructional practices that engage students.
- WHO will do it?
 - Classroom Teachers with PLC support
- WHEN will it be implemented and for how long?
 - Start Date---
 - 4 weeks
- **WHAT** data will be collected to monitor intervention on student performance
 - Accuracy on chapter tests and common assessments
 - Peer observations of instructional practices and student engagement
- **HOW** often will the data be reviewed?
 - After each chapter test.

Intervention Support

- Intervention plans should be developed based on student need and skills of staff
- All intervention plans should have intervention support
- Principals should ensure that intervention plans have intervention support
- Teachers should not be expected to implement plans for which there is no support

Intervention Documentation Worksheet

Teacher:

Week of

	Monday		Т	uesda	ıy	We	dnes	day	T	nursda	ay	Friday			Total #

T - These (if of extended)	Focus	Programming
1 = Time (# of minutes)	L = Language	(Create your own key. For example. W = Wilson Fundations, SST = Social Skills Training, CCC = Cover/Copy/Compare)
P = Program	PA = Phonemic Awareness	-
	P = Phonics	
F = Focus	F = Fluency	·
	V = Vocabulary	-
	C = Comprehension	
	MC = Math Computations	·
	MA = Math Applications	=
	B = Behavior	

Step 4

Response to Instruction/Intervention

Decision Rules: What Constitutes Sufficient Progress?

Decision Rules

• Response to Intervention Rules

• Linking Rtl to Intervention Decisions

Decision Rules: What is a "Good" Response to Intervention?

• Positive Response

- Gap is closing
- Can extrapolate point at which target student(s) will "come in range" of target--even if this is long range
- Level of "risk" lowers over time
- Questionable Response
 - Rate at which gap is widening slows considerably, but gap is still widening
 - Gap stops widening but closure does not occur
- Poor Response
 - Gap continues to widen with no change in rate.

Positive Response to Intervention

Elsie Tier 2 (Results 2) End of Grade 2 and Grade 3

Good Rtl

Decision Rules: What is a "Questionable" Response to Intervention?

- Positive Response
 - Gap is closing
 - Can extrapolate point at which target student(s) will "come in range" of target--even if this is long range

• Questionable Response

- Rate at which gap is widening slows considerably, but gap is still widening
- Gap stops widening but closure does not occur
- Level of "risk" remains the same over time
- Poor Response
 - Gap continues to widen with no change in rate.

Questionable Response to Intervention

Elsie Tier 2 (Results 2) End of Grade 2 and Grade 3

Questionable Rtl

Decision Rules: What is a "Poor" Response to Intervention?

- Positive Response
 - Gap is closing
 - Can extrapolate point at which target student(s) will "come in range" of target--even if this is long range
- Questionable Response
 - Rate at which gap is widening slows considerably, but gap is still widening
 - Gap stops widening but closure does not occur

• Poor Response

- Gap continues to widen with no change in rate.
- Level of "risk" worsens over time

Poor Response to Intervention
